

Corporate Presentation

September 2025 | Nxera Pharma Co., Ltd. (TSE: 4565)

Disclaimer

The material that follows is a presentation of general background information about Nxera Pharma Co., Ltd and its subsidiaries (collectively, the “Company”) as of the date of this presentation. This material has been prepared solely for informational purposes and is not to be construed as a solicitation or an offer to buy or sell any securities and should not be treated as giving investment advice to recipients. It is not targeted to the specific investment objectives, financial situation or particular needs of any recipient. It is not intended to provide the basis for any third-party evaluation of any securities or any offering of them and should not be considered as a recommendation that any recipient should subscribe for or purchase any securities.

The information contained herein is in summary form and does not purport to be complete. Certain information has been obtained from public sources. No representation or warranty, either express or implied, by the Company is made as to the accuracy, fairness, or completeness of the information presented herein and no reliance should be placed on the accuracy, fairness, or completeness of such information. The Company takes no responsibility or liability to update the contents of this presentation in the light of new information and/or future events. In addition, the Company may alter, modify or otherwise change in any manner the contents of this presentation, in its own discretion without the obligation to notify any person of such revision or changes.

This presentation contains “forward looking statements,” as that term is defined in Section 27 A of the U S Securities Act of 1933 as amended, and Section 21 E of the U S Securities Exchange Act of 1934 as amended. The words “believe”, “expect”, “anticipate”, “intend”, “plan”, “seeks”, “estimates”, and “and similar expressions identify forward looking statements. All statements other than statements of historical facts included in this presentation, including, without limitation, those regarding our financial position, business strategy, plans and objectives of management for future operations (including development plans and objectives relating to our products), are forward looking statements. Such forward looking statements involve known and unknown risks, uncertainties and other factors which may cause our actual results, performance or achievements to be materially different from any future results, performance or achievements expressed or implied by such forward looking statements. Such forward looking statements are based on numerous assumptions regarding our present and future business strategies and the environment in which we will operate in the future. The important factors that could cause our actual results, performance or achievements to differ materially from those in the forward looking statements include, among others, risks associated with product discovery and development, uncertainties related to the outcome of clinical trials, slower than expected rates of patient recruitment, unforeseen safety issues resulting from the administration of our products in patients, uncertainties related to product manufacturing, the lack of market acceptance of our products, our inability to manage growth, the competitive environment in relation to our business area and markets, our inability to attract and retain suitably qualified personnel, the unenforceability or lack of protection of our patents and proprietary rights, our relationships with affiliated entities, changes and developments in technology which may render our products obsolete, and other factors. These factors include, without limitation, those discussed in our public reports filed with the Tokyo Stock Exchange and the Financial Services Agency of Japan. Although the Company believes that the expectations and assumptions reflected in the forward-looking statements are reasonably based on information currently available to the Company’s management, certain forward-looking statements are based upon assumptions of future events which may not prove to be accurate. The forward-looking statements in this document speak only as at the date of this presentation and the company does not assume any obligations to update or revise any of these forward statements, even if new information becomes available in the future.

This presentation does not constitute an offer, or invitation, or solicitation of an offer, to subscribe for or purchase any securities. Neither this presentation nor anything contained herein shall form the basis of any contract or commitment whatsoever. Recipients of this presentation are not to construe the contents of this summary as legal, tax or investment advice and recipients should consult their own advisors in this regard.

This presentation and its contents are proprietary confidential information and may not be reproduced, published or otherwise disseminated in whole or in part without the Company’s prior written consent. These materials are not intended for distribution to, or use by, any person or entity in any jurisdiction or country where such distribution or use would be contrary to local law or regulation.

This presentation contains non-GAAP financial measures. The non-GAAP financial measures contained in this presentation are not measures of financial performance calculated in accordance with IFRS and should not be considered as replacements or alternatives profit, or operating profit, as an indicator of operating performance or as replacements or alternatives to cash flow provided by operating activities or as a measure of liquidity (in each case, as determined in accordance with IFRS). Non-GAAP financial measures should be viewed in addition to, and not as a substitute for, analysis of the Company’s results reported in accordance with IFRS.

Strategic Roadmap

02

Our History

Strategic steps taken to build Nxera over the last two decades

2000s

Launched a public company dedicated to **bringing innovation to Japan**

- ✓ IPO on TSE (MOTHERS) in 2004

Made strategic acquisitions to bring **steady revenue** through groundbreaking medicines

- ✓ \$186m acquisition of Arakis Limited in 2005
- ✓ Royalty revenues from Breezhaler® medicines from 2012 to present

ARAKIS

2015

Out-licensed several programs to global pharma to **generate profit, a cash reserve and a larger market valuation**

- ✓ 15+ partnered programs that generate upfront and milestone revenue (plus future royalties)

Invested in research-focused companies that could **generate a continuous pipeline of new medicines**

- ✓ \$400m acquisition of Heptares Therapeutics Limited in 2015

HEPTARES
therapeutics

2023

Elevated our status in the **Tokyo Stock Exchange**, improving access to institutional investors

- ✓ Promotion to TSE (PRIME) segment in 2023
- ✓ First public healthcare investment by the Japan Investment Corporation in 2023

Acquired a commercial-stage pharmaceutical company which provided an **integrated platform** for even greater sustainable revenue growth

- ✓ \$466m acquisition of Idorsia Pharmaceuticals Japan and Korea
- ✓ Rapidly growing revenues from sales of PIVLAZ®

Idorsia JAPAN
KOREA

2024

NXera

Launched new corporate branding:

Nxera Pharma Co

With a vision to lead the next era of medicine.

From Japan, for Japan, and the world.

Building a fully integrated biopharma from Japan

Accelerating growth to achieve our mission by leveraging business platform in Japan and UK

Priority objectives for FY2025

01

JPY 17 billion+ Net product sales (PIVLAZ[®] plus QUVIVIQ[®])

02

Acquire/in-license at least one late-stage medicine for Japan/APAC (ex-China)

03

Execute at least one new major partnership, and initiate at least one new in-house Ph.2 study

04

Investment in systems and applications for efficiency and scalability

05

Positive operating profit under IFRS (if GPR52 option is exercised)

Partner's Wave 1 and Wave 2 programs are positioned across fast growing disease areas of healthcare

	MARKET SIZE (2030)	WAVE1 (Potential Launch by 2030)	WAVE2 (Potential Launch by 2035)
Neurology	\$120bn+	 TEMPERO BIO™ P2 mGlu5 NAM <i>Substance Use Disorders</i>  CENTESSA P2 Ox2 agonist <i>Narcolepsy</i>  NEUROCRINE™ P3 M4 agonist <i>Schizophrenia</i> P2 M4 agonist <i>Bipolar Mania</i> P1 M1/M4 agonist <i>Schizophrenia</i>	 CENTESSA PreC Ox2 agonists <i>Neuropsych-related sleep disorders</i>  NEUROCRINE™ P1 M4 pref. agonist P1 M1 pref. agonist <i>Cognitive & psychosis-related disorders</i>  NXER P1 GPR52 agonist <i>Schizophrenia</i>  abbvie Disc Multiple targets <i>Neurology</i>

		JPY170bn (max total royalty potential at peak)	Multi billion USD milestones and royalties

Our 2030 vision is to build a high growth, highly profitable Japanese biopharma

JPY Bn

Note: * Revenue values are proforma the acquisition of Idorsia Pharmaceuticals Japan and Korea and reflect annual product sales of PIVLAZ in 2023.

** WAVE1 and WAVE2 royalty is not included.

Our Pipeline

Programs by Design

03

Major pipeline Overview (incl. projections)

★ : Data readouts anticipated in 2025

▭ : Exclusive license-out option

▭ : Exclusive license-in option

A : Nxera has APAC* rights

J : Nxera has Japan rights

Note: Pref. ag. : Preferring agonist

*APAC (ex-China) territory includes Japan, South Korea, Australia, Brunei, Cambodia, Indonesia, Laos, Malaysia, Myanmar, New Zealand, Philippines, Singapore, Taiwan, Thailand and Vietnam

*NXE0039732 (EP4 antagonist) is categorized as an in-house asset as we have not licensed out. Under the Clinical Trial and Licence Agreement (CTLA) in 2022, Cancer Research UK sponsors, designs and executes a Phase I/IIa clinical trial of NXE0039732, and Nxera holds a licence to the results generated under the trial to continue the clinical development and commercialization of NXE0039732.

Major pipeline Overview (incl. key partner highlights)

Note: Pref. ag. : Preferring agonist

*APAC (ex-China) territory includes Japan, South Korea, Australia, Brunei, Cambodia, Indonesia, Laos, Malaysia, Myanmar, New Zealand, Philippines, Singapore, Taiwan, Thailand and Vietnam

*NXE0039732 (EP4 antagonist) is categorized as an in-house asset as we have not licensed out. Under the Clinical Trial and Licence Agreement (CTLA) in 2022, Cancer Research UK sponsors, designs and executes a Phase I/IIa clinical trial of NXE0039732, and Nxera holds a licence to the results generated under the trial to continue the clinical development and commercialization of NXE0039732.

Looking ahead to potential catalysts in 2025*

✓ : Progress in 2025

PROGRAM	PARTNER	TIMING	EVENT
✓ Cenerimod		Feb. 2025	Assignment of JAPAC rights (excl. China)
✓ TMP-301 (mGlu5 NAM)		Mar. 2025	Phase 2 study start in alcohol use disorder
✓ NBI'568 (M4 agonist)		Apr. 2025	Phase 3 study start in Schizophrenia
NXE'732 (EP4 antagonist)		H2 2025	Phase 2a study start in Advancing Solid Tumours
NBI'568 (M4 agonist)		H2 2025	Phase 2 study start in Bipolar Mania
NBI'570 (M1/M4 agonist)		H2 2025	Phase 2 study start in Schizophrenia
NXE'744 (EP4 agonist)		H2 2025	Phase 2 study start in IBD
NXE'149 (GPR52 agonist)		H2 2025	Phase 1b completion
NXE'732 (EP4 antagonist)		H2 2025	Phase 1b topline data
ORX750 (OX2 agonist)		H2 2025	Phase 2 data readout (NT1/NT2/IH)
Lucerastat		H2 2025	Exclusive opt-in decision
TMP-301 (mGlu5 NAM)		End 2025	Phase 2 result in alcohol use disorder
✓ Multiple discovery collaboration progress		Jun. 2025 (Lilly)	Progression through discovery stage
NBI'567 (M1 ago) / NBI'569 (M4 ago) / NBI'570 (M1/M4 ago)		2025	Phase 1 data readout
✓ QUVIVIQ®		Feb. 2025	Out licensing in Taiwan
New global out-licenses		Anytime	Out licensing and/or discovery collabs
New Japan / APAC in-licenses		Anytime	Acquire/in-license late-stage medicines
QUVIVIQ®		Anytime	APAC out-licensing deals

* Partnered product progress is as already signaled or disclosed by partner

Key strategy for each business category

Maximize the value of each business and demonstrate synergies by conducting integrated development in future

Organic Growth

NxWave™ platform driven

- Collaborate with existing partners to help them to progress pipeline licensed from us
- Execute at least one new high value collaboration and/or co-investment per year

Acquire or in-license for Japan

- Maximize and optimize sales and profit for two major products (PIVLAZ®/QUVIVIQ™)

Strategic Growth

- Collaborate/invest in new technologies with synergies

- In-license late-stage products for clinical development and commercialization in Japan and APAC

Japan/APAC Business

Deliver innovation to patients in Japan/APAC

04

Japan will serve as our base to expand across APAC markets

Japan is an attractive, established market with strong volumes

Japan is the second largest pharma market (ex-China)

Market size (USD bn) (2021)

Tailwinds from near-term regulatory changes

“ Japan Phase 1 Drug Clinical Trials No Longer Needed for Global Clinical Trials ”

High quality clinical and regulatory environment

- ✓ Excellent access to Doctors/HCPs who evaluate novel drugs
- ✓ Typically achieve strong patient uptake
- ✓ Reduces drug loss and drug lag for Japan patients

APAC is the second highest growth pharma market

Market growth (CAGR %) (2019 - 2027)

Source: IQVIA Market Prognosis, Sep 2022; IQVIA Institute, Nov 2022.

APAC (ex-China) territory includes South Korea, Australia, Brunei, Cambodia, Indonesia, Laos, Malaysia, Myanmar, New Zealand, Philippines, Singapore, Taiwan, Thailand and Vietnam

PIVLAZ® (clazosentan, an endothelin A antagonist)

Our first commercially available product for the prevention of cerebral vasospasm in patients with Aneurysmal Subarachnoid Haemorrhage (aSAH)

Quarterly PIVLAZ® Net Sales

Annual PIVLAZ® sales and its growth

Steady progress against company plans.

QUVIVIQ® (daridorexant, dual orexin antagonist “DORA”)

DORA is rapidly establishing its position in the treatment paradigm for insomnia

Sales and market share (NHI-base)

Prescription share (Most frequently prescribed sleeping pills)

- ✓ DORAs are rapidly penetrating the insomnia treatment market in Japan, where traditional anti-anxiety and z-class drugs are not preferred by physicians
- ✓ Japan is one of the largest DORA markets globally – estimated at up to US\$1bn
- ✓ Together with partner Shionogi, we aim to provide a best-in-class product

QUVIVIQ® Business structure

Royalty profits initiated and supply margin expected in a few years

Sales structure

Profit structure for Nxera

Full year product sales guidance

Target 13.0 - 14.0 Bn JPY (PIVLAZ[®]) as net sales, and 4.0 - 5.0 Bn JPY (QUVIVIQ[®]) as royalty and supply

Target sales in FY2025

13.0 – 14.0 Bn JPY

(NHI Sales: 15.7 – 16.9 Bn JPY)

+7%

4.0 – 5.0 Bn JPY

(Shionogi: FY26/3E = 9.3 Bn JPY)

+220%

Sales trend

Source: MDV DPC hospital data

*: Comparison of 2-4Q of 2022 and 2023, ** NHI sales, *** 2024 sales includes upfront, milestone, royalty and product supply while 2025 sales includes royalty and product supply

A high-speed photograph of a green liquid splash, possibly paint or ink, against a dark background with out-of-focus bokeh lights in shades of orange, red, and blue. The liquid forms a complex, flowing shape that dominates the left and center of the frame.

Our NxWave™ Platform

Cutting-edge Science

05

NxWave™ platform enables faster, cheaper and more precise drug discovery

World-leading science and platform enables efficient drug discovery against difficult targets

	Conventional drug discovery	Our drug discovery
Approach	Empirical design	Rational design (computer-based)
Method	High Throughput Screening (HTS ¹)	Proprietary NxWave™ Platform
Period ²	4.5 years on average	3.0 years on average
Costs ²	\$15 million	\$5 million
Features ³	Difficult to design drugs precisely – high development attrition rate	Execute more precise drug design – lower development attrition rate
Target ³	Difficult for GPCRs with unstable structures	Best for GPCRs with unstable structures

¹ HTS/High Throughput Screening is a method to find drug candidates by reacting tens of thousands to millions of compounds with drug targets using large machines and human hands.

² The period from target selection to preclinical testing. For conventional drug discovery, figures are taken from NATURE REVIEWS Drug Discovery (MARCH 2010).

³ Precise drug design make clear the binding site of target, make easier to improve compound, create backups and redo – potentially increase the success rate. GPCR is most popular drug target which account for 30% of current drug target.

NxWave™: Proprietary structure-based drug design delivering proven pipeline impact

Target ID and Validation

Identifying the best targets

NxStaR™

Stabilising the right targets

NxHit™

Identifying the optimal hits

NxDesign™

Selecting the best candidate

Translational Med.

Testing the therapeutic hypothesis

World-leading productivity

	Clinical Candidates		Phase 1	Phase 2	Phase 3
Total		29	18	5	1
Active (as of August 2025)	✓	15	✓ 11	✓ 4	✓ 1

Number of Structures Solved and Deposited in PDB, Resolution by technology

The number of structures solved using Cryo-EM is increasing, X-ray crystallography has extremely high resolution

Number of structure solved by technology

Resolution by technology

Our platform enables precise design of GPCR models

Only by performing detailed structural analysis can we design great drugs.

Imprecise GPCR model: **Standard Medicine**

Poorly understood GPCRs (locks) led to suboptimal drugs (keys) being designed

Precise GPCR model: **Optimized Medicine**

High selectivity enables to **optimize efficacy and minimize side effects**

Our track record of major licensing transactions speaks for itself...

Income from licensing provides a great source of non-dilutive financing to support our growth

Balance of potential milestone income from existing license agreements¹

Top 15 pharmaceutical/biotech companies by license value² (cumulative total since 2015)

¹ Balance as of the end of the fiscal year of only those currently under contract. TEVA and AbbVie (formerly Allergan), for which compounds were returned, are excluded from the balances from FY2018 and FY2021, respectively.

² The figures are based on 'Licensing' category on third party's (EvaluatePharma's) proprietary database and therefore do not completely match the amounts shown in the LHS chart.

Source: Company's data (LHS) and EvaluatePharma (as of 2024/10/17) (RHS)

... hundreds of millions of dollars received, billions of dollars in potential to come

New collaboration and exclusive option to license agreement executed with Boehringer Ingelheim

Partner	Execution	Program	Therapeutic Area(s)	Upfront and Initial Milestones	Potential Total Milestone ¹
 Boehringer Ingelheim	March 2024	Collaboration and exclusive option-to-license agreement for GPR52 agonist	Schizophrenia	€25m	€670m
	December 2022	Multi-target Collaboration	Diabetes and Metabolic	\$37m	\$800m
	August 2022	Multi-target Collaboration	Neurological disorders	\$80m	\$1.2bn
	December 2021	Collaboration and license agreement for M ₄ , M ₁ and M ₁ /M ₄ dual agonist	Neurological disorders	\$100m	\$2.6bn
	December 2020	Collaboration and license agreement for GPR 35	Gastrointestinal, immunology	\$44m	\$480m
	December 2020	Collaboration and license agreement for CGRP portfolio	Neurology	\$10m	\$380m
	June 2020	Discovery Collaboration and Option to License ²	Inflammatory and Autoimmune	\$32m	\$400m
	August 2019	Multi-target Collaboration	Multiple; Initial focus on Gastrointestinal	\$26m	\$1.2bn
 A Member of the Roche Group	July 2019	Multi-target Collaboration	Multiple	\$26m	\$1.0bn
	November 2015	Multi-target Collaboration	Multiple	-	\$1.8bn

¹Potential option fees, development, regulatory and commercial milestone payments agreed at the time of transaction. Nxera is also eligible to receive tiered royalties ranging from high single digit to mid-teen percentage on future net sales of any products developed under the partnership. ² AbbVie has the option to expand the collaboration by an additional three targets

Muscarinic program development.

Ph3 ongoing for our product NBI'568, which aims to be best-in-class, owing to its predecessor Cobenfy

Nxera's research team began working on muscarinic agonists over 10 years ago.
Opportunity remains wide open for best-in-class approaches across a myriad of potential indications

Topline Results for Phase 2 Trial of M4 Agonist

Efficacy confirmed at 20 mg. Statistically significant difference in both PANSS and CGI-S compared to placebo.

Once-Daily 20mg Dose Demonstrated Clinically Meaningful and Statistically Significant Efficacy at Week 3, 4, 5, and 6

20mg QD Efficacy Data Week 4 – Week 6			
Week	4	5	6**
PANSS Total Score			
LS Mean ¹	-16.4	-20.2	-18.2
LS Mean Difference vs. Placebo ¹	-6.8 p = 0.008	-10.0 p < 0.001	-7.5 p = 0.011
Effect Size ²	0.53	0.72	0.61

** Primary Endpoint = Week 6

B. Changes in CGI-S Score

*P<0.05 **P<0.01 ***P<0.001

LS means are from a MMRM, which includes treatment group, visit, and stage of randomization as fixed effects; treatment group-by-visit interaction; baseline score as covariate; and participant as a random effect. Cohen's d based on observed values.

“The effects with the 20-milligram dose, both PANSS and CGI-S scores consistently showed statistically significant differences vs. placebo, meaning that you are seeing a reproducible response here.”

Comparison of Study Sites and Duration with Known Muscarinic Programs

Mentioned in a presentation Phase 3 of NBI-568 will be one to one randomization and around 20 sites per study

	Neurocrine/Nxera	Neurocrine/Nxera	BMS/Karuna	AbbVie/Cerevel
Compound	NBI-1117568	NBI-1117568	Cobenfy/Kar-XT	CVL-231/Emraclidine
Study name	NCT05545111	NCT06963034	EMERGENT-2/3	EMPOWER-2/3
Route of Administration	oral (once daily)	oral (once daily)	oral (twice daily)	oral (once daily)
Size	213	280+	Total 518	Total 752
Randomization	drug: placebo = 2:1	drug: placebo = 1:1	drug: placebo = 1:1	drug: placebo = 2:1
Number of study sites	15 sites	20 sites (estimate)	22 sites (EMERGENT-2) 32 sites (EMERGENT-3)	26 sites (EMPOWER-2) 25 sites (EMPOWER-3)
Duration	1.8years	2025/5-2027/10(2.2years)	1.6years	2.2years
Phase	Ph2 (completed)	Ph3 (on trial)	Ph3 (completed)	Ph2 (unsuccessful)
Primary endpoint	PANSS Total Score Change (Week 6)	PANSS Total Score Change (Week 5)	PANSS Total Score Change (Week 5)	PANSS Total Score Change (Week 5)

Data comparison of placebo effects (Total PANSS)

Large number of study sites in a clinical trial of muscarinic program may be linked to a higher placebo response.

“Number of facilities is another important factor in managing the placebo effect”

Safety: Adverse Events Risk

The gastrointestinal and cardiovascular adverse events were higher than placebo in Cobenfy, but not with NBI-568

NBI-568

	Placebo N=70	20mg QD N=40	40mg QD N=39	60mg QD N=34	30mg BID N=27	All Treated N=140

NBI'567	M1 agonist	-			

Ph1 results to be reported in 2025

Covers M1 and M4 , treats cognitive and psychiatric symptoms through multiple approaches

Centessa are building a leading portfolio of OX2R agonists in sleep/neuro disorders

ORX750, ORX142, and ORX489 positioned as potential first/best-in-class across NT1, NT2, IH, and neuro disorders

PHASE 2a STUDY CRYSTAL-1

Randomized, Double-Blind, Placebo-Controlled Basket Study of ORX750 in Patients with NT1, NT2, and IH is Underway
Data expected in all three indications in 2025

CRYSTAL-1 STUDY

- Innovative design with potential to enable **well-powered** and efficient data generation
- All patients to receive ORX750 for **at least 4 weeks**
- Optimal number of patients to allow **efficient recruitment**
- Potential for **optimized dose selection**

Positioned to be Potential Best-in-Class / First-in-Class in Emerging Category of OX2R Agonist Therapeutics

- ORX750** for the treatment of **NT1, NT2 and IH**
- ORX142** for the treatment of **neurological and neurodegenerative disorders**
- ORX489** for the treatment of **neuropsychiatric disorders**
- Earlier stage OX2R agonists and therapeutics for additional potential indications

Molecule	hOX2R EC50 (nM)	Selectivity vs. hOX1R
Native ligand orexin-A (OXA) ¹	0.035	n/a
ORX750 ¹	0.110	9,800x
ORX142 ²	0.069	13,000x
ORX489 ³	0.035	8,800x

Multi-asset pipeline discovered using NxWave™ - Unlocking commercial potential across differentiated CNS indications

Data on OX2 agonist competitors

ORX750 reported favorable safety and efficacy results in Phase 1b trials

TAK-861

TMP-301, an mGlu5 NAM being developed by TemperoBio

Two clinical trials in alcoholism and cocaine disorder are ongoing in patients

Pipeline

Highlights

- Tempero Bio Secures \$70 Million Series B Financing to Advance TMP-301 into Phase 2 Trials for Substance Use Disorders (March 24, 2025)
- Phase 2 for alcohol use disorder and Phase 1 for cocaine use disorder will finish in 2H 2025.
- Tempero Bio plans to initiate Phase 2 trial for cocaine use disorder within the next year

Two clinical results with patient subjects may be reported later in the year or later

Nxera launched broad new pipeline for obesity and chronic weight management

7 programs underway with in-house development in the obesity area

Aligned with the Oral Therapeutics Shift

MECHANISM	ORAL SMALL MOLECULE*	Nxera 
GLP-1 ag	21	
GIP ag/ant	1	
Amylin ag	1	
Apelin ag	0	
Other	1	(Not disclosed)

Highlights

- Benefits of oral small molecules for metabolic diseases:
 - ✓ Greater patient convenience – no need for cold chain storage
 - ✓ Improved access in primary care and emerging markets
 - ✓ Enables polypharmacology
 - ✓ Reduced Cost of Goods
 - ✓ Positive payor story
- Nxera advancing multiple programs targeting GLP-1, GIP, Amylin and Apelin receptors. Partnership negotiations in this therapeutic area also ongoing
- Strong progress with our partner Eli Lilly, worth up to ~US\$700m, with key program milestone achieved earlier this year

GPR52 agonist for schizophrenia

A novel first-in-class mechanism to treat positive, negative & cognitive domains of schizophrenia

Disease Rationale

- GPR52 is expressed on D2 dopamine neurons in striatum where activation could lead to D2 antagonist-like effect to treat positive symptoms, e.g. hallucinations
- GPR52 also co-located with D1 dopamine receptor in prefrontal cortex where activation could lead to D1 agonist-like effect to improve cognition, e.g. attention

Progress

- **Ph1a study completed**
 - Pharmacodynamic measures included
 - PK data is robust and in line with preclinical predictions
 - Support once daily dosing
- **Ph1b study initiated and will complete by 2H 2025**
 - Proof of Mechanism study
 - A study with a pharmacodynamic endpoint to confirm GPR52 activation in the brain

EP4 agonist for inflammatory bowel disease (IBD)

A first-in-class GI-targeted agent to promote mucosal healing in IBD

Disease Rationale

- IBD is an immunological disorder in which current standard-of-care agents have treatment "ceilings" of about 40% response rates.
- All approved IBD agents are immunomodulatory in nature and do not directly target disease-induced mucosal barrier defects.
- Through combined anti-inflammatory and barrier repair effects, EP4 agonists are expected to bring benefits in IBD by promoting mucosal healing.
- Previous attempts to agonise the EP4 receptor have demonstrated early signals of clinical efficacy but have been limited by systemic safety.

Progress

- **FTIH SAD/MAD studies have completed**
 - No concerning adverse events noted to date
 - UC patient cohort is underway and indomethacin challenge model is due to start in Sep25
 - Biomarker data analysis from Ph1 studies is ongoing to inform project strategy
 - Input sought from Clinical Advisory Board on emerging clinical and target engagement data

Improved barrier repair & homeostasis
↓ permeability

Financial Results

06

Key financial indicators

H1 Revenue up 19% driven by Product Sales and Milestones (due to progress of partnered programs).

Major factors

Revenue

Upfront¹ Milestone² Royalty / Other Product Sales

- USD10m received from Viatris for assignment of rights for Cenerimod in Japan and APAC (February 2025).
- Partner Neurocrine started a Ph3 trial of NBI-1117568 in schizophrenia triggering a US\$15 million milestone.
- Partner Centessa started a Ph1 trial of orexin receptor agonist ORX142 triggering US\$4.8 million in milestones.
- Royalties from respiratory portfolio sales by Novartis were broadly flat.
- 8% growth in PIVLAZ® sales (to JPY5,805m).
- Inclusion of QUVIVIQ® supply & royalty income in H1 25.

Operating Profit / (Loss)

R&D Cost of Sales G&A

- Increased investment in R&D activities, including 3 programs in clinical trials.
- Increase due to inclusion of QUVIVIQ® product supply costs.
- Non-cash PIVLAZ® inventory charge no longer required.
- Decrease in NPJ costs due to targeted savings.
- Inclusion of QUVIVIQ® intangible asset amortization in H1 25.

¹ Upfront fee revenue recognised at deal inception

² Milestone revenue recognised at milestone event + deferred revenue releases

Breakdown of Q2 YTD results

Business is progressing well, with significant growth in commercial revenues

(JPY million)	 Platform* ¹	 Commercial* ²	=	Consolidated P&L (Core)	 Non-core costs	=	Consolidated P&L (IFRS)
	(YoY)	(YoY)		(YoY)			(YoY)
Revenue	6,132 -16%	8,962 +66%		15,094 +19%	Total : 3,120		15,094 +19%
Cost of Sales	1,065 -2%	2,380 +223%		3,445 +89%			3,473 -1%
SG&A	2,600 +33%	2,569 -28%		5,169 -6%	A Amortization (894) B Other (1,531)		7,566 -6%

Other income	668 +42	(5) -7		663 +36			663 +36
OP/Core OP	(2,952) -3,723	3,316 +2,911		Core OP (364) -812			OP (2,756) +898

A Amortization of intangible assets (currently relates to PIVLAZ® and QUVIVIQ®).

B Amortization of other intangible assets (e.g. IP), depreciation (e.g. laboratory equipment), share-based payments and other restructuring costs.

*1 = Nxera Pharma Co. Ltd. (formerly Sosei Group Corporation) + Nxera Pharma UK Ltd (formerly Heptares Therapeutics Ltd.) + Sosei K.K. (ex -Nxera Pharma Basel branch)

*2 = Nxera Pharma Japan (formerly Idorsia Pharmaceuticals Japan) + Nxera Pharma Korea (formerly Idorsia Pharmaceuticals Korea) + Nxera Pharma Basel branch

Full year cost Guidance for FY2025 (Unchanged)

Small increase in R&D expenditure with progression of several programs into later stages of development, and in-licensing of one or more late-stage candidates. Lower to flat SG&A expenses through streamlining costs

R&D expenses (IFRS basis)

JPY12,000 to JPY14,000m (No change)

Key points in FY2025

- The guidance remains unchanged as R&D expenditure will reduce in the second half.
- In-house programs (EP4 ant., EP4 ago., GPR52 ago.) moving into Ph1b - Ph2.
- Clinical development of one or more in-licensed late-stage assets in Japan.

S&M + G&A expenses (IFRS basis)

JPY15,000 to JPY17,000m (No change)

Key points in FY2025

- Investment in technology to increase efficiency and deliver future growth.
- Increase in amortization as QUVIVIQ® has launched.
- Lower or flat SG&A expenses vs. FY2024 through cost savings.

Core Operating Profit - Definition

Core Operating Profit/Loss – a financial indicator closer to the reality of our business

Operating Profit “Core”

- Core Operating Profit/ Loss is a key financial indicator that highlights the underlying recurring cash generating capability of our business.
- Core Operating Profit/Loss is defined as IFRS Operating Profit + material Non-cash costs + material non-recurring costs
- Material Non-cash Costs include depreciation, amortization, share based payments and impairment.
- Material Non-recurring Costs include restructuring costs, M&A related professional fees and other material one-off items.

+ Material Non-cash Costs

(Depreciation, Amortization, Share based payments, Impairment...etc.)

+ Material Non-recurring Costs

(Restructuring costs and Other material one-off items...etc.)

	Cash	Non-cash (Material)
Recurring	Costs under “Core”	
Non-recurring (Material)		Costs under “IFRS”

Operating Profit “IFRS”

- Financial results recorded and prepared in accordance with International Financial Reporting Standards (IFRS)

Exchange Rate, Intangible Assets and Non-core Costs

Glossary

Basic Terminology/Technology		
GPCR	G Protein-Coupled Receptor	There are about 800 types of GPCRs in the human body. While 400 of them are known to be potential drug targets, about 300 of them are not yet drugged
NxStaR™	Stabilized Receptor	Nxera' proprietary technology to stabilize a GPCR by engineering a small number of single point mutations outside of the ligand-binding site. It enables to identify the structure of GPCRs to be used for SBDD drug discovery as well as antibody drug discovery as antigens
SBDD	Structure-Based Drug Design	A method to design drugs on a computer base based on the analysis of the three-dimensional structure of the drug target (e.g., protein receptor)
TPD	Targeted Protein Degradation	Drugs that promote the degradation of target proteins (e.g., receptors) in cells and aim for therapeutic effects by reducing disease-causing proteins
PAM	Positive Allosteric Modulator	A regulator that binds to unusual active sites (allosteric sites) on the receptor to increase the affinity and effect of the agonist
NAM	Negative Allosteric Modulator	A regulator that binds to an unusual active site on the receptor (allosteric site) and reduces the affinity and effectiveness of the agonist
Ag	Agonist	A therapeutic drug that binds to a receptor and activates an intracellular signaling system similar to biological substances
Ant	Antagonist	A therapeutic drug that suppresses biological reactions by binding to receptors and preventing them from binding to biological substances
PK	Pharmacokinetics	Research and testing on the relationship between drug dosage and blood concentration. Mainly describes the rate process of ADME
PD	Pharmacodynamics	Research and testing on the relationship between drug concentration and pharmacological effects
ADME	Absorption, Distribution, Metabolism and Excretion	A series of process in the absorption of drugs into the body, distribution within the body, metabolism in the liver and other organs, and excretion in the kidneys and other organs
POM	Proof of Mechanism	Proof of mechanism of action, mainly through biomarkers. It can suggest the possibility of efficacy in fewer cases than POC
POC	Proof of Concept	Proof of a therapeutic concept, primarily through clinical efficacy and safety
Ach	Acetylcholine	A neurotransmitter released from the peripheral parasympathetic and motor nerves to transmit nerve stimuli
IND	Investigational New Drug	Information packages for development candidates to be submitted to the U.S. Food and Drug Administration (FDA) at the time of initiation of clinical trials
Ph1	Phase1	A study in humans. The main purpose is to confirm the safety of the drug candidate mainly by healthy volunteers.
Ph2	Phase2	A study in humans. The main purpose is to confirm the efficacy of the drug candidates on a small scale (however, the number of patients varies greatly depending on the disease)
Ph3	Phase3	A study in humans. The main purpose is to determine the efficacy of the drug candidates on a large scale (however, the number of patients varies greatly depending on the disease)
NDA	New Drug Application	An application to the U.S. Food and Drug Administration (FDA) for approval to market a new drug

Disease/Drug		
LAMA	Long Acting Muscarinic Antagonist	An inhalant that dilates bronchial tubes and improves respiratory function by inhibiting the action of acetylcholine receptors (M3), which increase parasympathetic nerves.
LABA	Long Acting Beta2-Agonist	An inhalant that improves respiratory function by stimulating sympathetic beta2 receptors to dilate the bronchi.
ICS	Inhaled Corticosteroid	An inhalant that suppresses airway inflammation to prevent coughing attacks and other symptoms caused by asthma, also promotes the action of beta 2 stimulants and improve airway hyperresponsiveness.
mCRPC	Metastatic Castration-Resistant Prostate Cancer	Cancer that has spread (metastasized) beyond your prostate gland and for which hormone therapy is no longer effective in stopping or slowing the disease.
COPD	Chronic Obstructive Pulmonary Disease	A group of diseases that causes damage to the bronchi and lung due to smoking or inhalation of toxic substances, resulting in breathing problems.
AD	Alzheimer's Disease	Alzheimer's disease is a progressive neurologic disorder that causes the brain to shrink (atrophy) and brain cells to die, the most common cause of dementia .
DLB	Dementia with Lewy Bodies	Protein deposits, called Lewy bodies, develop in nerve cells in the brain regions involved in thinking, memory and movement (motor control), the second most common type of dementia.

2

Thank you

The background of the slide is a vibrant, abstract composition. It features thick, glossy, three-dimensional ribbons in shades of deep blue and bright yellow. These ribbons are twisted and looped, creating a sense of dynamic movement and depth. They are set against a background that transitions from a warm orange at the top to a rich, saturated red at the bottom. The lighting on the ribbons creates bright highlights and deep shadows, emphasizing their fluid, ribbon-like texture.
