

Corporate Presentation

August 2026 | Nxera Pharma Co., Ltd. (TSE: 4565)

Disclaimer

The material that follows is a presentation of general background information about Nxera Pharma Co., Ltd and its subsidiaries (collectively, the “Company”) as of the date of this presentation. This material has been prepared solely for informational purposes and is not to be construed as a solicitation or an offer to buy or sell any securities and should not be treated as giving investment advice to recipients. It is not targeted to the specific investment objectives, financial situation or particular needs of any recipient. It is not intended to provide the basis for any third-party evaluation of any securities or any offering of them and should not be considered as a recommendation that any recipient should subscribe for or purchase any securities.

The information contained herein is in summary form and does not purport to be complete. Certain information has been obtained from public sources. No representation or warranty, either express or implied, by the Company is made as to the accuracy, fairness, or completeness of the information presented herein and no reliance should be placed on the accuracy, fairness, or completeness of such information. The Company takes no responsibility or liability to update the contents of this presentation in the light of new information and/or future events in addition, the Company may alter, modify or otherwise change in any manner the contents of this presentation, in its own discretion without the obligation to notify any person of such revision or changes.

This presentation contains “forward looking statements,” as that term is defined in Section 27 A of the U.S. Securities Act of 1933 as amended, and Section 21 E of the U S Securities Exchange Act of 1934 as amended. The words “believe”, “expect”, “anticipate”, “intend”, “plan”, “seeks”, “estimates”, and “and similar expressions identify forward looking statements. All statements other than statements of historical facts included in this presentation, including, without limitation, those regarding our financial position, business strategy, plans and objectives of management for future operations (including development plans and objectives relating to our products), are forward looking statements. Such forward looking statements involve known and unknown risks, uncertainties and other factors which may cause our actual results, performance or achievements to be materially different from any future results, performance or achievements expressed or implied by such forward looking statements. Such forward looking statements are based on numerous assumptions regarding our present and future business strategies and the environment in which we will operate in the future. The important factors that could cause our actual results, performance or achievements to differ materially from those in the forward looking statements include, among others, risks associated with product discovery and development, uncertainties related to the outcome of clinical trials, slower than expected rates of patient recruitment, unforeseen safety issues resulting from the administration of our products in patients, uncertainties related to product manufacturing, the lack of market acceptance of our products, our inability to manage growth, the competitive environment in relation to our business area and markets, our inability to attract and retain suitably qualified personnel, the unenforceability or lack of protection of our patents and proprietary rights, our relationships with affiliated entities, changes and developments in technology which may render our products obsolete, and other factors. These factors include, without limitation, those discussed in our public reports filed with the Tokyo Stock Exchange and the Financial Services Agency of Japan. Although the Company believes that the expectations and assumptions reflected in the forward-looking statements are reasonably based on information currently available to the Company’s management, certain forward-looking statements are based upon assumptions of future events which may not prove to be accurate. The forward-looking statements in this document speak only as at the date of this presentation and the company does not assume any obligations to update or revise any of these forward statements, even if new information becomes available in the future.

This presentation does not constitute an offer, or invitation, or solicitation of an offer, to subscribe for or purchase any securities. Neither this presentation nor anything contained herein shall form the basis of any contract or commitment whatsoever. Recipients of this presentation are not to construe the contents of this summary as legal, tax or investment advice and recipients should consult their own advisors in this regard.

This presentation and its contents are proprietary confidential information and may not be reproduced, published or otherwise disseminated in whole or in part without the Company’s prior written consent. These materials are not intended for distribution to, or use by, any person or entity in any jurisdiction or country where such distribution or use would be contrary to local law or regulation.

This presentation contains non-GAAP financial measures. The non-GAAP financial measures contained in this presentation are not measures of financial performance calculated in accordance with IFRS and should not be considered as replacements or alternatives profit, or operating profit, as an indicator of operating performance or as replacements or alternatives to cash flow provided by operating activities or as a measure of liquidity (in each case, as determined in accordance with IFRS). Non-GAAP financial measures should be viewed in addition to, and not as a substitute for, analysis of the Company’s results reported in accordance with IFRS.

Commercial Business

Two marketed products continue to grow, with a new product launch in early 2026 to support the next phase

エングザン®点眼静注液
ヒヴラッツ® 150mg

Pivlaz

A “Practical Guide to Clazosentan Administration” was released in March 2026.

クービビク® 25mg 50mg

Quviviq

Shionogi will be responsible for sales.
Nxera holds the rights to product supply and royalties

Vamorolone

Potential to replace existing steroid therapy
Estimated sales synergy with Pivlaz® of ~70%

Platform Business

Partner-led development progressing well; strong phase 1 readouts for in-house programs

Muscarinic Agonist Portfolio

Program	Target Disease	Phase
Direclidine	Schizophrenia	Phase3
	Bipolar disorder	Phase2
NBI'570	Schizophrenia	Phase2
NBI'569	AD's Psychosis	Phase1
NBI'567	AD	Phase1
	LBD	

First phase 3 readout for direclidine expected in 2027

Royalty: high single digits to mid-teens;
Total milestones: up to \$2.6bn

Lead asset Cobenfy peak sales
expected to exceed JPY600bn

Orexin Agonist Portfolio

Program	Target Disease	Phase
ORX750	NT1/NT2/IH	Phase2
ORX142	Neurological disorders	Phase2
ORX489	Neurological disorders	-

ORX750 to enter a registrational
program in 1H 2026

Royalty: low single digits
Development and sales milestones

ORX750 peak sales expected
to exceed ¥200bn

Under development in-house

Program	Target Disease	Phase
NXE'732	Solid Cancer	Phase2

Ongoing phase 2 readout for
NXE'732 expected in 2027

Nxera retains global rights

NXE'732 showed early efficacy signals,
including two partial responses

Strategic Roadmap

02

Priority objectives for FY2026

01

JPY 19.5 billion+ Net product sales
(PIVLAZ[®] plus QUVIVIQ[®])

02

Get one or more late-stage assets
for Japan and APAC (excl. China)

03

Sign one or more high-value partnership deals

04

Initiate at least one partner-sponsored phase 2 trial

05

Reduce total costs by >10% and
achieve full-year profitability on IFRS basis

Key financial results (H1 FY2026)

Achieved profitability in both core OP and OP

(JPY million)

PROGRESS IN H1 FY2026

- Received multiple milestone payments from Neurocrine, Centessa, Lilly, AbbVie, and others
- Initiation of Phase 2 trial of M1/M4 agonist NBI-570 (received US \$22.5 million)

- Pivlaz®: +9% YoY
- Quviviq®: +127% YoY

- R&D expenses decreased due to more efficient investment and capital allocation (progress vs. full-year forecast: 50%)
- SG&A expenses increased in line with initial forecasts (held constant at 49%)

Both our commercial and platform businesses are now profitable

Both our commercial and platform businesses are now profitable

*3 = The benefits of the business restructuring implemented since November 2025 are expected to become more evident in the latter half of 2026

No change to the earnings guidance

ИХЕГА

Looking ahead to potential catalysts in 2026*

✓ : Completed

PROGRAM	PARTNER	TIMING	EVENT	
✓ ORX142 (OX2 agonist)		Feb 2026	Phase 2 study start	
✓ ORX489 (OX2 agonist)		Mar 2026	Phase 1 study start	
✓ NBI'570 (M1/M4 ago)		April 2026	Phase 2 study start	
✓ Multiple discovery collaboration progress	abbvie 	1H 2026	Progression through discovery stage	
ORX750 (OX2 agonist)		2026	Phase 2a data across NT1, NT2, and IH	
ORX750 (OX2 agonist)		2026	Registrational program start in NT1/NT2/IH	
Cenerimod		Q4 2026	Phase 3 data readout	
NBI'567 (M1 ago) / NBI'569 (M1/M4 ago)		2H 2026	Clinical progression	
NBI'567 (M1 ago) / NBI'569 (M1/M4 ago) / NBI'570 (M1/M4 ago)		2026	Phase 1 data disclosure	
New global out-licenses		Anytime	Out licensing and/or discovery collabs	
New Japan / APAC in-licenses		Anytime	Acquire/in-license late-stage medicines	
QUVIVIQ® / Vamorolone		Anytime	APAC out-licensing deals	

* Partnered product progress is as already signaled or disclosed by partner

Our 2030 vision is to build a high growth, highly profitable Japanese biopharma

JPY Bn

Note: * Revenue values are proforma the acquisition of Idorsia Pharmaceuticals Japan and Korea and reflect annual product sales of PIVLAZ in 2023.

** WAVE1 and WAVE2 royalty is not included.

*** As of late October 2025, Temporo Bio has temporarily halted advancement of the TMP-301 program and is assessing strategic alternatives

Japan/APAC Business

Deliver innovation to patients in Japan/APAC

03

Japan will serve as our base to expand across APAC markets

Japan is an attractive, established market with strong volumes

Japan is the third largest pharma market (ex-China)

Market size share

(2024)

Favourable JP market environment

- ✓ National healthcare coverage
- ✓ Timely reimbursement (i.e., within 90 days after regulatory approval)
- ✓ Government initiatives to reduce drug loss and drug lag for Japan patients

APAC is the second highest growth pharma market

Market growth (CAGR %)

(2019 - 2027)

Source: IQVIA Market Prognosis, Sep 2022; IQVIA Institute, Nov 2022.

APAC (ex-China) territory includes Japan, South Korea, Australia, Brunei, Cambodia, Indonesia, Laos, Malaysia, Myanmar, New Zealand, Philippines, Singapore, Taiwan, Thailand and Vietnam

PIVLAZ® (clazosentan, an endothelin A antagonist)

Our first commercially available product for the prevention of cerebral vasospasm in patients with Aneurysmal Subarachnoid Haemorrhage (aSAH)

PIVLAZ® quarterly sales

PIVLAZ® Annual Sales and Growth Rate

PIVLAZ® is rapidly gaining adoption and is becoming the standard of care for the prevention of cerebral vasospasm.

QUVIVIQ® (daridorexant, dual orexin antagonist “DORA”)

DORA is rapidly establishing its position in the treatment paradigm for insomnia

Domestic Market Size for DORA

Source: Prepared by the Company based on each company's earnings presentation materials

QUVIVIQ® Annual Sales and Growth Rate

5.0 – 6.0 Bn JPY

QUVIVIQ® Business structure

Royalty profits initiated and supply margin expected in a few years

不眠症治療薬 / オレキシン受容体拮抗薬
クービビク®錠 25mg 50mg
薬価基準未収載

Commercial

Sales structure

Profit structure for Nxera

Supply chain optimization

Comprehensive strategy to optimize the end-to-end supply chain

Achievements as of today

- ✓ Establish Nxera independent supply chain from the licensor
- ✓ Regulatory approval on 2nd API source in October 2025

Future plan

- ✓ Achieve further cost optimization on raw materials
- ✓ Optimize drug product and packaging sourcing

In-licensing of vamorolone (AGAMREE®) for DMD

There is no established therapy for DMD other than corticosteroids in Japan

Vamorolone (AGAMREE®)

- First-in-class drug candidate that binds to the **same receptors as corticosteroids** but modifies the downstream activity of the receptors
- Nxera has the development rights for **Japan, South Korea, Australia and New Zealand**
- DMD treatment is concentrated in a limited number of centers and there is approximately **70% sales synergy with PIVLAZ®**

Duchenne Muscular Dystrophy (DMD)

- DMD is a rare and life-threatening neuromuscular disorder
- Characterized by progressive muscle dysfunction leading to ambulation loss, respiratory failure, heart issues and premature death
- No efficacious therapy apart from corticosteroids, however they present many severe adverse events

Vamorolone (AGAMREE®) addresses the need for a tolerable steroid

Compared with conventional corticosteroid therapy, the risk of treatment-related adverse events is reduced

- Vamorolone confronts the limitations of standard corticosteroid therapy
- Topline data from the recent GUARDIAN clinical study showed **durable efficacy** and **markedly improved safety** of vamorolone vs. standard corticosteroids
- **Study demonstrated reduction of steroid-associated adverse events related to:**
 - **Growth – normal growth maintained ($p < 0.0001$)**
(Mean height difference after 5 years: +12.17 cm)
 - **Bone health – lower vertebral fracture rate ($p = 0.0061$)**
(vamorolone 8.1% vs deflazacort 41.9%)
 - **Eye health – lower incidence of cataracts ($p < 0.015$) and no cases of glaucoma**
(vamorolone 5.3% vs deflazacort 37.8%)
- Reduction of side effects allows patients **to maintain treatment**

Analyst consensus forecast of vamorolone in other countries

(Sales mUSD)

- North America (by Catalyst)
- Europe (by Santhera)

Synergy with Pivlaz

DMD treatment is concentrated in a limited number of centers and there is approximately 70% commercial overlap with PIVLAZ, creating significant sales synergies

Proportion of prescription volume by hospital

A high-speed photograph of a green liquid splash, possibly paint or ink, against a dark background with out-of-focus bokeh lights in shades of blue, orange, and red. The liquid forms a complex, flowing shape that curves from the upper left towards the lower right.

Our NxWave™ Platform

Cutting-edge Science

04

Renewed R&D focus where the science is strongest and the opportunity is greatest

IN-HOUSE PORTFOLIO - R&D FOCUS AND PROGRAM PRIORITISATION

R&D focus on highest potential opportunities

Developing next-generation therapies for obesity, metabolic disorders, and endocrine diseases

Differentiation through an oral formulation and a novel binding mode in an obesity market dominated by injectables

Obesity Market Opportunity and Our Development Program

Mechanism	Target	Market(\$)
GLP-1 ag.	Obesity / Metabolic	\$141Bn
GIP ant.		\$10Bn
GIP ag.		\$40Bn
Amylin ag.		\$20Bn
TSHR NAM	Thyroid eye disease	\$5.5Bn
PTH ag.	Hypoparathyroidism	\$4.4Bn

Differentiation & Development Schedule

- Moving beyond maximum weight loss alone: small molecules with unique efficacy, tolerability, weight loss quality, access and durable co-morbidity outcomes.
- Uniquely differentiated chemotypes discovered and progressed for GLP-1 agonist and Amylin agonists.
- On track for four IND enabling studies in 2027 and multiple clinical trials planned to be initiated in 2028

REDEFINING OBESITY, WEIGHT MANAGEMENT AND RELATED CO-MORBIDITIES BY DELIVERING POTENT, WELL TOLERATED, ORAL SMALL MOLECULES TO MEET A CRITICAL GLOBAL NEED AT SCALE.

NXE'744: EP4 agonist for IBD* – target engagement & Phase 2 ready

A first-in-class GI-targeted agent to promote mucosal healing in IBD

EP4 AGONIST OFFERS A DIFFERENTIATED MOA TO CURRENT SOC:

Modulation of barrier homeostasis and inflammatory axis positions EP4 as an attractive MOA for IBD therapy

Adapted from (Weisshof et al 2018)

- All elements of the first-in-human study have now completed dosing in the clinic
 - **SAD/MAD studies are complete** with no concerning adverse events and no systemic exposure observed
 - **Gut restricted profile confirmed** by high gut tissue concentrations measured following oral dosing
 - **UC patient cohort has completed dosing** (n=6) with interim analysis confirming high gut tissue concentration.
 - **Indomethacin challenge cohort complete**, interim analysis complete with no need to increase subjects and final data read-out by March 2026
 - Preliminary data analysis demonstrates a **highly significant ~50% reduction in indomethacin induced permeability** in the NXE'744 treatment group; these data confirm **target engagement in the small intestine**

NXE'149: GPR52 agonist for schizophrenia – Phase 2 ready

A novel first-in-class mechanism to treat positive, negative & cognitive domains of schizophrenia

Phase 1 highlights:

- ✓ Safe and well tolerated
- ✓ Human PK showed low variability and consistent with once daily dosing
- ✓ High level of central penetration
- ✓ Pharmacodynamic measures provide evidence of engagement of brain circuitry relevant to the treatment of schizophrenia and related disorders

Phase 2 enablement:

- 3 month GLP toxicology in 2 species
- 2 species EFD completed
- Metabolite characterisation complete
- Drug substance and drug product available for phase 2 start

SAD PK data

EEG and ERP measures

- NXE'149 clearly engages frontotemporal circuitry underlying the MMN and ASSR responses, both of which are reproducible biomarkers in schizophrenia
- Resting state EEG data suggest increased arousal on day 10 of treatment

Cognition

Cogstate assessment demonstrated improvements in cognitive performance across doses on day 10 of treatment

General cognitive composite	Dose 1	Dose 2	Dose 3	Dose 4
Attention/Executive Function	0.89	1.5	0.69	0.64
General Cognition	1.1	0.84	0.77	0.55

Standardized differences between each dose of NXE'149 compared to placebo

NXE'732: EP4 antagonist is our novel immunotherapy for solid tumors

Phase 2a expansion in process in combination with atezolizumab

Disease Rationale

- When EP4 is activated, it dampens immune responses and promotes tumor growth
- EP4 antagonism is a highly attractive mechanism supported by recent clinical data for ONO-4578 in gastric cancer
- NXE-732 is designed to deliver **high potency, selectivity, and safety**

Phase 1 trial results

- The emerging data for NXE-732 points to a potential best-in-class profile
- Two partial responses were observed in MSS CRC and anti-PD-L1 resistant ccRCC in the combination arm, with meaningful tumor shrinkage of over 30% demonstrated
- Target engagement confirmed and no dose-limiting toxicities

Baseline

3 months

Phase 2a expansion study underway in **MSS Colorectal** (PIK3CA, HER2± others), **Gastric/GOJ Adenocarcinoma**, **Renal (ccRCC)**, **Prostate (CRPC)**

... hundreds of millions of dollars received, billions of dollars in potential to come

Partner	Execution	Program	Therapeutic Area(s)	Upfront and Initial Milestones	Potential Total Milestone ¹
 Boehringer Ingelheim	March 2024	Collaboration and exclusive option-to-license agreement for GPR52 agonist	Schizophrenia	€25m	€670m
	December 2022	Multi-target Collaboration	Diabetes and Metabolic	\$37m	\$800m

 A Member of the Roche Group	July 2019	Multi-target Collaboration	Multiple	\$26m	\$1.0bn
	November 2015	Multi-target Collaboration	Multiple	-	\$1.8bn

¹Potential option fees, development, regulatory and commercial milestone payments agreed at the time of transaction. Nxera is also eligible to receive tiered royalties ranging from high single digit to mid-teen percentage on future net sales of any products developed under the partnership. ² AbbVie has the option to expand the collaboration by an additional three targets

Neurocrine is advancing the world's most comprehensive portfolio of muscarinic agonists to treat neuropsychiatric disorders

Program	Mechanism	Disease State	Stage of Development
Direclidine	M4 Agonist	Schizophrenia	Phase 3
		Bipolar Mania	Phase 2
NBI-'570	Dual M1/M4 Agonist	Schizophrenia / LAI Potential	Phase 2
NBI-'569	Dual M1/M4 Agonist	Alzheimer's Psychosis	Entering Phase 1b
NBI-'567	M1 Preferring Agonist	Alzheimer's Cognition	Phase 1
		Lewy Body Dementia	

Five clinical-stage programs spanning the M1, M4, and dual M1/M4 mechanisms designed using NxWave™

Muscarinic program development.

Ph3 ongoing for our product NBI'568, which aims to be best-in-class, owing to its predecessor Cobenfy

Nxera's research team began working on muscarinic agonists over 10 years ago. Opportunity remains wide open for best-in-class approaches across a myriad of potential indications

Note: NBI-568 is investigational and not approved for any use by any regulatory body

Topline Results for Phase 2 Trial of M4 Agonist

Efficacy confirmed at 20 mg. Statistically significant difference in both PANSS and CGI-S compared to placebo.

Once-Daily 20mg Dose Demonstrated Clinically Meaningful and Statistically Significant Efficacy at Week 3, 4, 5, and 6

B. Changes in CGI-S Score

*P<0.05 **P<0.01 ***P<0.001

LS means are from a MMRM, which includes treatment group, visit, and stage of randomization as fixed effects; treatment group-by-visit interaction; baseline score as covariate; and participant as a random effect. Cohen's d based on observed values.

“The effects with the 20-milligram dose, both PANSS and CGI-S scores consistently showed statistically significant differences vs. placebo, meaning that you are seeing a reproducible response here.”

Comparison of Study Sites and Duration with Known Muscarinic Programs

As noted in Neurocrine's presentation, Phase 3 of NBI-568 will use one-to-one randomization and around 20 sites per study

	Neurocrine/Nxera	Neurocrine/Nxera	BMS/Karuna	AbbVie/Cerevel
Compound	NBI-1117568	NBI-1117568	Cobenfy/Kar-XT	CVL-231/Emraclidine
Study name	NCT05545111	NCT06963034/NCT07105098	EMERGENT-2/3	EMPOWER-2/3
Route of Administration	oral (once daily)	oral (once daily)	oral (twice daily)	oral (once daily)
Size	213	580+	Total 518	Total 752
Randomization	drug: placebo = 2:1	drug: placebo = 1:1	drug: placebo = 1:1	drug: placebo = 2:1
Number of study sites	15 sites	20 sites (estimate)	22 sites (EMERGENT-2) 32 sites (EMERGENT-3)	26 sites (EMPOWER-2) 25 sites (EMPOWER-3)
Duration	1.8years	2025/5-2027/10(2.2years)	1.6years	2.2years
Phase	Ph2 (completed)	Ph3 (on trial)	Ph3 (completed)	Ph2 (unsuccessful)
Primary endpoint	PANSS Total Score Change (Week 6)	PANSS Total Score Change (Week 5)	PANSS Total Score Change (Week 5)	PANSS Total Score Change (Week 6)

Data comparison of placebo effects (Total PANSS)

Large number of study sites in a clinical trial of muscarinic program may be linked to a higher placebo response

“Number of facilities is another important factor in managing the placebo effect”

Safety: Adverse Events Risk

The gastrointestinal and cardiovascular adverse events were higher than placebo in Cobenfy, but not with NBI-568

NBI-568

Consideration Structure	\$38.00 per share in cash + 1 non-transferable CVR
Transaction value	Up to \$47.00 per share (Up to US\$7.8 billion)
Total CVR Value	Up to \$9.00 per share CVR Milestone ①: \$2.00 per CVR ORX750 or ORX142 obtains U.S. FDA approval for NT2 within 5 years from closing CVR Milestone ②: \$5.00 per CVR ORX750 or ORX142 obtains U.S. FDA approval for IH within 5 years from closing CVR Milestone ③: \$2.00 per CVR ORX750 or ORX142 obtains its first U.S. FDA approval for any indication by January 1, 2030
Premium	Approximately 40.5% premium to the 30-day VWAP as of market close on March 30, 2026
Closing	Expected in Q3 2026

Preliminary Phase 2a data demonstrate a potentially best-in-class profile across three indications
Centessa announced an agreement to be acquired by Eli Lilly (up to US\$7.8 billion) on March 31, 2026

Data on OX2 agonist competitors

ORX750 reported favorable safety and efficacy results in Phase 1b trials

TAK-861

- Ph2b NT1 patients
- n=112 (Week8)

ALKS2680

- Ph1b NT1 patients
- n=34

ORX750

- Ph1b healthy volunteers
- n=10

In AI-driven drug discovery, our 15 years of proprietary data will be a major competitive advantage.

Development Roadmap and Organization

The diagram illustrates the workflow of a quantum machine learning model for drug discovery. On the left, a large collection of diverse chemical structures is labeled "Proprietary compound library". A blue arrow points from this library to a central area. On the right, a circular inset labeled "Quantum-level precision" shows a detailed molecular docking simulation of a ligand (in orange and yellow) within a protein's binding pocket (represented by a grey surface and blue ribbons). Below this, a horizontal sequence of five molecular structures, connected by arrows, shows the iterative refinement of a molecule, starting from a simple orange structure and evolving through various configurations to a more complex one.

Our platform enables precise design of GPCR models

Only by performing detailed structural analysis can we design great drugs.

Imprecise GPCR model: **Standard Medicine**

Poorly understood GPCRs (locks) led to suboptimal drugs (keys) being designed

Precise GPCR model: **Optimized Medicine**

High selectivity enables us to **optimize efficacy** and **minimize side effects**

1: Exclusive license-out option

2: NXE0039732 (EP4 antagonist) is categorized as an in-house asset as we have not licensed out. Under the Clinical Trial and Licence Agreement (CTLA) in 2022, Cancer Research UK sponsors, designs and executes a Phase I/IIa clinical trial of NXE0039732, and Nxera holds a licence to the results generated under the trial to continue the clinical development and commercialization of NXE0039732.

Core Operating Profit - Definition

Core Operating Profit/Loss – a financial indicator closer to the reality of our business

Operating Profit “Core”

- Core Operating Profit/ Loss is a key financial indicator that highlights the underlying recurring cash generating capability of our business.
- Core Operating Profit/Loss is defined as IFRS Operating Profit + material Non-cash costs + material non-recurring costs
- Material Non-cash Costs include depreciation, amortization, share based payments and impairment.
- Material Non-recurring Costs include restructuring costs, M&A related professional fees and other material one-off items.

+ Material Non-cash Costs

(Depreciation, Amortization, Share based payments, Impairment...etc.)

+ Material Non-recurring Costs

(Restructuring costs and Other material one-off items...etc.)

	Cash	Non-cash (Material)
Recurring	Costs under “Core”	
Non-recurring (Material)		Costs under “IFRS”

Operating Profit “IFRS”

- Financial results recorded and prepared in accordance with International Financial Reporting Standards (IFRS)

Glossary

Basic Terminology/Technology		
GPCR	G Protein-Coupled Receptor	There are about 800 types of GPCRs in the human body. While 400 of them are known to be potential drug targets, about 300 of them are not yet drugged
NxStaR™	Stabilized Receptor	Nxera' proprietary technology to stabilize a GPCR by engineering a small number of single point mutations outside of the ligand-binding site. It enables to identify the structure of GPCRs to be used for SBDD drug discovery as well as antibody drug discovery as antigens
SBDD	Structure-Based Drug Design	A method to design drugs on a computer base based on the analysis of the three-dimensional structure of the drug target (e.g., protein receptor)
TPD	Targeted Protein Degradation	Drugs that promote the degradation of target proteins (e.g., receptors) in cells and aim for therapeutic effects by reducing disease-causing proteins
PAM	Positive Allosteric Modulator	A regulator that binds to unusual active sites (allosteric sites) on the receptor to increase the affinity and effect of the agonist
NAM	Negative Allosteric Modulator	A regulator that binds to an unusual active site on the receptor (allosteric site) and reduces the affinity and effectiveness of the agonist
Ag	Agonist	A therapeutic drug that binds to a receptor and activates an intracellular signaling system similar to biological substances
Ant	Antagonist	A therapeutic drug that suppresses biological reactions by binding to receptors and preventing them from binding to biological substances
PK	Pharmacokinetics	Research and testing on the relationship between drug dosage and blood concentration. Mainly describes the rate process of ADME
PD	Pharmacodynamics	Research and testing on the relationship between drug concentration and pharmacological effects
ADME	Absorption, Distribution, Metabolism and Excretion	A series of process in the absorption of drugs into the body, distribution within the body, metabolism in the liver and other organs, and excretion in the kidneys and other organs
POM	Proof of Mechanism	Proof of mechanism of action, mainly through biomarkers. It can suggest the possibility of efficacy in fewer cases than POC
POC	Proof of Concept	Proof of a therapeutic concept, primarily through clinical efficacy and safety
Ach	Acetylcholine	A neurotransmitter released from the peripheral parasympathetic and motor nerves to transmit nerve stimuli
IND	Investigational New Drug	Information packages for development candidates to be submitted to the U.S. Food and Drug Administration (FDA) at the time of initiation of clinical trials
Ph1	Phase1	A study in humans. The main purpose is to confirm the safety of the drug candidate mainly by healthy volunteers.
Ph2	Phase2	A study in humans. The main purpose is to confirm the efficacy of the drug candidates on a small scale (however, the number of patients varies greatly depending on the disease)
Ph3	Phase3	A study in humans. The main purpose is to determine the efficacy of the drug candidates on a large scale (however, the number of patients varies greatly depending on the disease)
NDA	New Drug Application	An application to the U.S. Food and Drug Administration (FDA) for approval to market a new drug

Disease/Drug		
LAMA	Long Acting Muscarinic Antagonist	An inhalant that dilates bronchial tubes and improves respiratory function by inhibiting the action of acetylcholine receptors (M3), which increase parasympathetic nerves.
LABA	Long Acting Beta2-Agonist	An inhalant that improves respiratory function by stimulating sympathetic beta2 receptors to dilate the bronchi.
ICS	Inhaled Corticosteroid	An inhalant that suppresses airway inflammation to prevent coughing attacks and other symptoms caused by asthma, also promotes the action of beta 2 stimulants and improve airway hyperresponsiveness.
mCRPC	Metastatic Castration-Resistant Prostate Cancer	Cancer that has spread (metastasized) beyond your prostate gland and for which hormone therapy is no longer effective in stopping or slowing the disease.
COPD	Chronic Obstructive Pulmonary Disease	A group of diseases that causes damage to the bronchi and lung due to smoking or inhalation of toxic substances, resulting in breathing problems.
AD	Alzheimer's Disease	Alzheimer's disease is a progressive neurologic disorder that causes the brain to shrink (atrophy) and brain cells to die, the most common cause of dementia .
DLB	Dementia with Lewy Bodies	Protein deposits, called Lewy bodies, develop in nerve cells in the brain regions involved in thinking, memory and movement (motor control), the second most common type of dementia.
